Subject Index Volume 69 (1992)

adsorption, 189
amino acid transport, 273
amino acid, 131

blood oxygenators, 235
boundary layer resistance, 43
buoyant density, 87

cell culture, 259
ceramic membranes, 21
composite membranes, 29, 51, 109
concentration polarization, 189, 273
contact lenses, 43
controlled release, 223
coupled, facilitated transport, 61, 75
crown ether, 61, 75

dead-end and crossflow ultrafiltration, 259
diffusion, 29, 179, 223
dissociation, 213
dissolved oxygen permeability, 43
drug delivery, 223
dual-sorption model, 51

edge effect, 43
electrodialysis, 273
electrostatic potential, 131
electrotransport, 273
ESCA, 121
ethanol and water sorption and diffusion, 223

facilitated transport, 99
fiber membranes, 1, 11
fluors, 179
fouling, 87, 259
fusaric acid, 51

hemoglobin, 213
hydrogen bonding, 155

ion-exchange membranes, 51, 273
ionic diffusion, 155

liquid membranes, 61, 75, 99, 131, 143
liquid permeability and separations, 109, 169

mass transfer, 235
membrane distillation, 169
membrane fouling, 189
membrane modules, 235
membrane pore size, 21
membrane potential, 29
membrane preparation and structure, 21, 61, 75, 109, 121, 143, 179
microporous and porous membranes, 1, 11, 21, 131, 169
mineral membrane, 259
modules, 1, 11

near infrared spectroscopy, 155
non-isothermal transport, 169

osmosis, 213
oxygen transfer, 1, 11

perfluorosulfonate ionomer membranes, 155
pervaporation, 109
plasma polymerized membranes, 109
polarography, 43
protein separation, 189

reverse osmosis, 29
reversed micelles, 75
rigid gas permeability, 43

scintillation, 179
selective carrier, 143
sol-gel technique, 21
solubility and partitioning, 179, 223
substituted phenol, 61
surface characteristics, 121
surfactants, 251
synthetic carriers, 143

tetradentate hydroxamate, 143
theory, 213
transport number, 29
transport, 51
TRIS/MMA copolymer, 43

ultrafiltration, 87, 189, 251

water treatment, 1, 11
water sorption, 155

zeta potential, 121
